

PEARL HARBOR SHIPYARD ADDS TO LIFE-LINE™ INSTALLATION

August 13, 1998, Valencia, California - Safe Environment Engineering, LP announces that the Company has received a Purchase Order from the Pearl Harbor Naval Shipyard, to expand their existing Life•line™ installation. Life•line™ has been in use at Pearl Harbor since 1997, monitoring personnel who maintain the United States Navy's nuclear submarines. The additional Main Monitoring Console (MMC) is expected to be delivered during the third quarter of 1998.

Safe Environment develops and supplies communications systems which integrate wireless telemetry and voice communication to transmit information. The Company uses this technology in its patented Life•line™ systems, which, in one version, enables monitoring of entrants into confined spaces or hazardous locations; and, in another configuration, monitors security personnel on patrol rounds.
