Safe Environment Engineering Releases New Sensor Detector Application

Safe Environment Engineering releases the identiFINDER remote wireless application as part of its family of interoperable CBRN integrated detectors.

The Lifeline identiFINDER application. With one button push the user can acquire background (also being transmitted live), identify the isotope and have the spectra sent to the ICBRNE server for retrieval by a Subject Matter Expert (SME) (Ex. DND). At the same time an alert can be sent (E-mail, Text or Phone call) telling the SME that there is data (spectra) available.

This approach eliminates the need to connect the instrument to a computer to download and E-mail identification and spectra data.
